CITY OF WILDOMAR
PAVEMENT MANAGEMENT PROGRAM UPDATE REPORT
JANUARY 2019
Executive Summary

A. Background

The purpose of a Pavement Management Program (PMP) is to establish and maintain a uniform definition and procedure for the application of various maintenance strategies to extend the overall expected life cycle of the City's transportation system in the most economical and efficient manner. In addition, it provides a multi-year work plan that can be implemented based on expected and/or desired needs and funding.

Since the City of Wildomar's incorporation in 2008 from Riverside County, a Pavement Management Program (PMP) was developed and implemented in March 2013. This included the use of the StreetSaver 9.0 online version software, developed by Metropolitan Transportation Commission (MTC), conducting field pavement assessments on City streets, populating the database and developing a 5-year CIP Work Plan based on current and projected revenues from the City.

In Late June 2018, the City gave notice to Interwest Consulting Group to update the PMP based on the last 5 years of pavement treatment, assessment of the pavement deterioration and road network changes due to development. The City also requested Council Districts be identified for each street segment and 5-Year CIP report based on various budget scenarios.

B. Project Scope and Understanding

The City of Wildomar is responsible for repairing and maintaining 123 centerline miles of roadway. Under this update, the City's pavement network reflects the following changes since 2013:

- ✓ A total of 6.7 centerline miles was added to the network.
- ✓ Unpaved (private and public) roadways totaling 3.4 miles were removed from the PMP StreetSaver database. Staff will track this separately.
- ✓ A total of 48 new street segments were created – 8% increase from the original database.

As part of this PMP update, the following was conducted:

1. Perform field pavement assessments on City streets, with the exception of recently paved streets.
2. Updated the database to reflect only paved roadways within the City's boundaries, StreetSaver does not calculate pavement condition index or recommend treatments for streets that are not paved.
3. Addition of street segments that were annexed or developed since 2013.
4. Update maintenance treatments that were performed since 2013 which includes the City's capital projects and developer lead projects.
5. Updated database to correct or revise segment descriptions including roadway lengths.
6. Allocated Council Districts to each street segment.
7. Identified public vs private roads and paved vs dirt/gravel roads.
8. GIS street layers were updated to reflect existing streets for mapping purposes.

C. Pavement Network and Condition

The Pavement Condition Index (PCI) is a visual measurement of pavement grade or condition and ranges from 0 to 100. A newly constructed road would have a PCI of 100, while a failed road would have a PCI of 15 or less. **The City's network average PCI is 68.** This PCI is higher than the State's average PCI of 65. As data shows below, the City and all of Riverside County is in the "Fair" and "At Risk" category for year 2018.

Figure 1. Map from 2008 & 2018 California Statewide Local Streets and Roads Needs Assessment Report

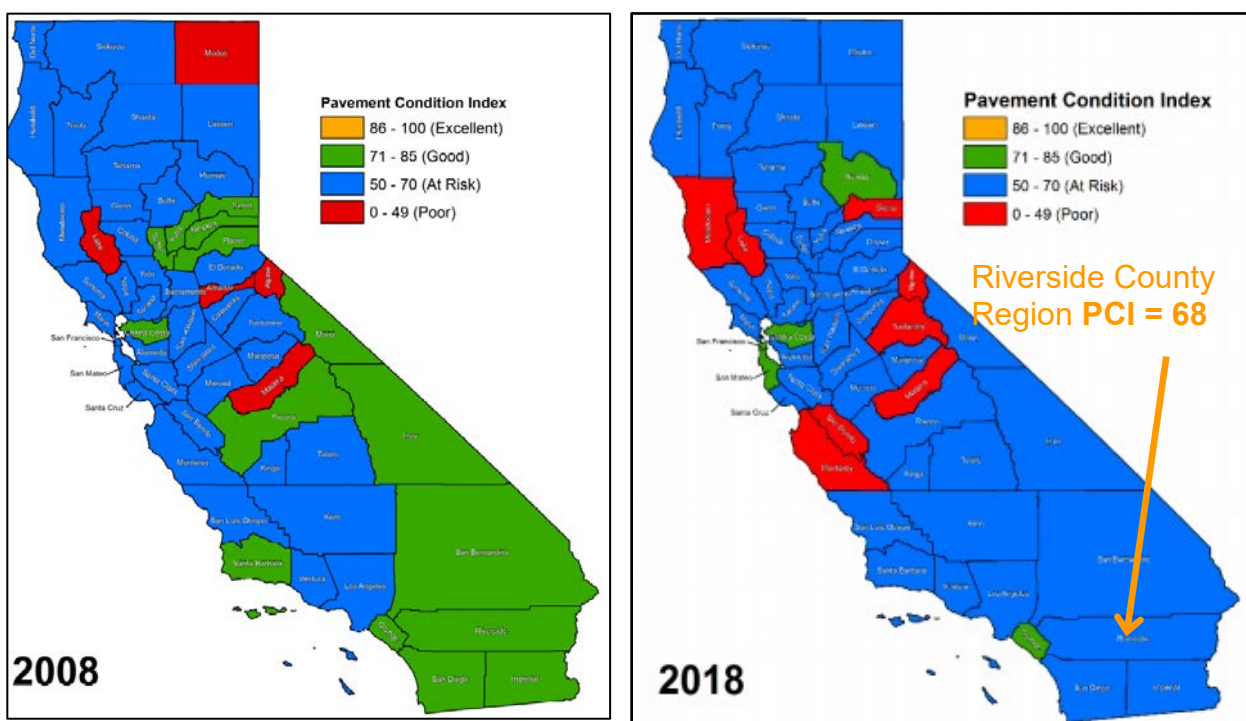

Figure 2. Table 2018 California Statewide Local Streets and Roads Needs Assessment Report

California Statewide Local Streets and Roads Needs Assessment
October 2018

19

Table 2.4 Summary of PCI Data by County (includes Cities) for 2008-2018

County (Cities Included)	Centerline Miles	Lane Miles	Area (sq)	Average Weighted PCI*					
				2008	2010	2012	2014	2016	2018
Orange	6,592	16,493	151,894,951	78	76	77	77	79	79
Placer	2,068	4,282	34,279,854	79	77	71	69	68	64
Plumas	704	1,111	9,090,221	71	66	66	64	72	73
Riverside	7,929	17,916	158,743,818	71	72	70	70	71	68
Sacramento	5,859	11,041	95,282,220	68	66	64	62	62	60
San Benito	492	761	5,156,435	68	66	66	48	46	37
San Bernardino	8,898	22,161	180,402,259	72	70	70	71	71	70
San Diego	7,759	18,763	173,945,867	74	69	67	66	65	64

Figure 3. Pavement Condition Index Rating Chart

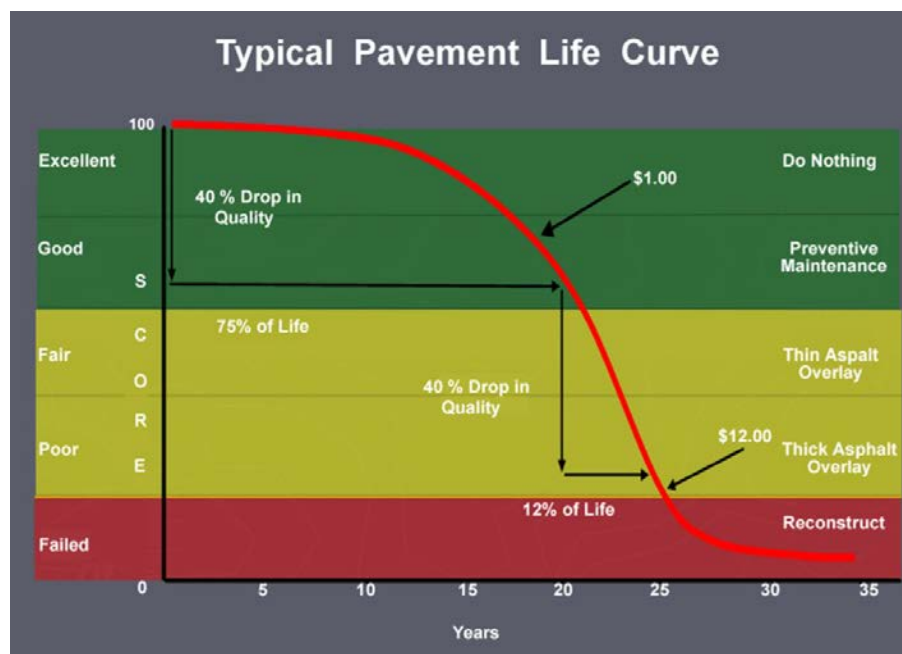

The City's result is somewhat alarming as this is an indicator that the City is not investing enough funds or their strategy for maintaining their pavements is resulting in poor pavement conditions. The City's network average PCI in March 2013 was 74. **This is a 6 point drop over 5 years.**

The timing of pavement maintenance treatments is important as well. Research and experience has shown it is far less expensive to maintain a road in good condition than it is to allow a road to deteriorate before repairing it (refer to Figure 4). The curve shows the rate at which the pavement condition deteriorates over time. A roadway worsens slowly at the beginning of its projected life span. At this point, preventative surface treatments are significantly less costly. The level of pavement deterioration per year increases drastically as the pavement enters the Fair range, and is considered the critical zone in the

pavement's life. At this point, it becomes much more expensive to keep the roadway in good service condition. PMP place priority on maintaining these good condition roads first, which over the long-term will effectively provide a higher condition roadway at a lower cost.

Figure 4. Typical Pavement Deterioration and Relative Treatment Costs

The City's PCI of 68 indicates that a good portion of the City's streets are at the beginning phase of the "Fair" and "at Risk" category. At this category, preventive maintenance treatments (i.e., slurry seals, chip seals, thin overlays) are the most cost-effective treatment. The various pavement treatments can generally be linked to PCI Ranges as shown in Table 1 below.

Table 1. Pavement Network and Condition

PCI Range	Treatment
PCI (70 - 100) Good to Excellent Condition	DO NOTHING to ROUTINE MAINTENANCE - may be in need of crack sealing or minor localized repair and/or surface sealing.
PCI (50 - 69) Fair/At Risk Condition	PREVENTIVE MAINTENANCE - pavement surface in need of surface sealing or thin overlay.
PCI (25 - 49) Poor Condition	STRUCTURAL IMPROVEMENT - pavement structure in need of additional overlay thickness to resist traffic loading.
PCI (0 – 24) Very Poor/Failure Condition	RESTORATION TREATMENT - in need of full depth reconstruction and/rehabilitation of structural section.

Table 2 provides a summary of the City's pavement network and its conditions by functional classes. Overall arterials, collectors (rural) and residential streets reflect similar PCI averages with collectors (urban) reflecting almost 14 points less than the average. Whereas Figure 5 provides the condition category by functional class with noted centerline miles.

Table 2. Pavement Network and Condition

Functional Class	Centerline Miles	% of Network	Average PCI
Arterial	17.44	14.18%	70
Collector	10.36	8.42%	54
Collector (Rural)	2.58	2.01%	72
Residential	92.53	75.29%	69
Total	122.90	100%	68

Figure 5. Chart of Condition Category by Functional Class

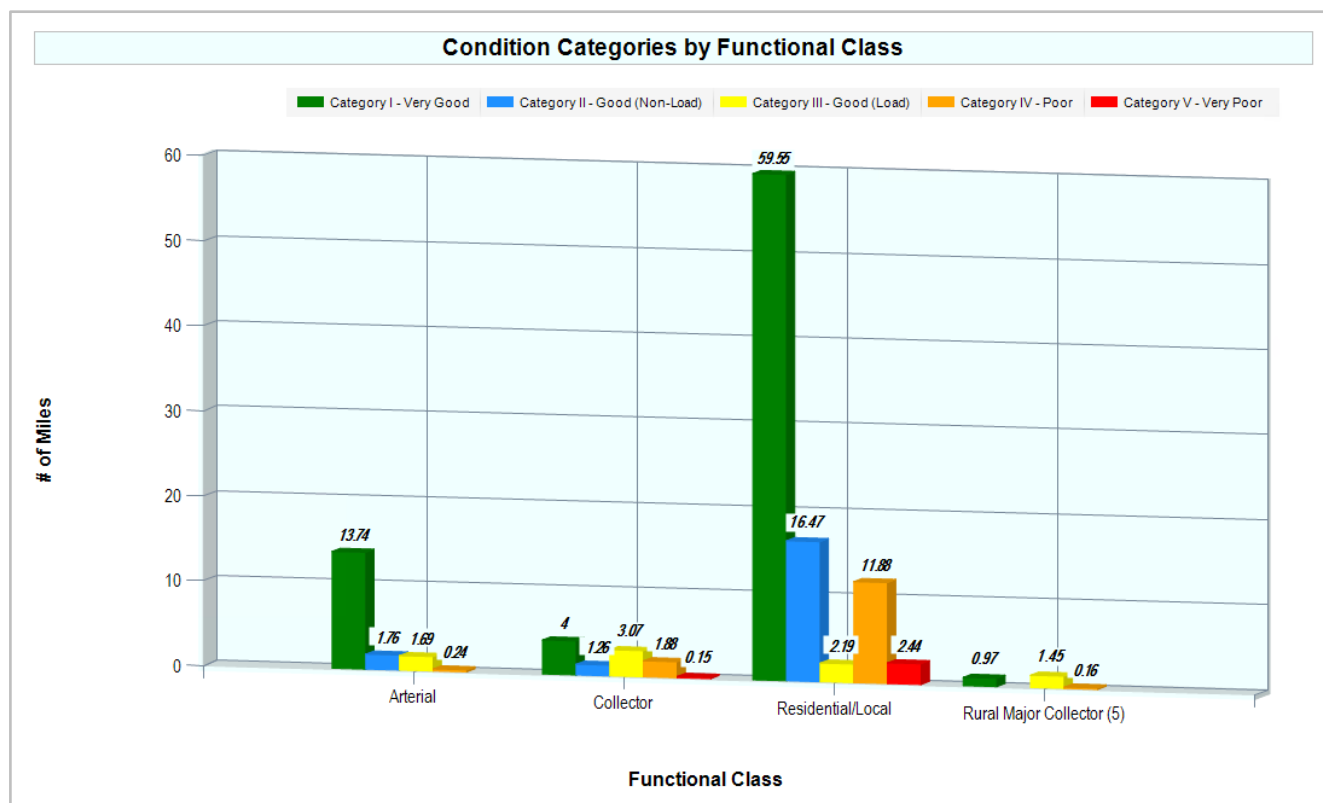

Table 3 shows the distribution of pavements by functional class and condition category in the City. Over 83% of the City's road are "Good" to "Fair" with the other 17% in the "Poor" and "Very Poor" category. Also see Attachment 1 which contains a map of the condition category of the City.

Table 3. Pavement Condition Breakdown by Category

Condition Category	PCI Range	Arterial (%)	Collector (%)	Residential (%)	Total Network (%)
Good to Excellent (I)	70 - 100	9.0%	2.8%	44.4%	56.2%
Fair (II/III)	50 - 69	4.8%	3.5%	18.6%	26.9%
Poor (IV)	25 - 49	1.5%	3.7%	9.0%	14.2%
Very Poor/Failure (V)	0 - 24	0.0%	0.1%	2.6%	2.7%
Total		15.2%	10.1%	74.6%	100.0%

D. Current Budget and Practices

The City's network average PCI in March 2013 was 74. The current PCI network is now 68, a drop of 6 points in over 5 years. Previous slurry seals, microsurfacing and thin overlays performed in the last 5 years and the addition of new roads constructed from 2013 to 2018, have kept the overall PCI from dropping much lower. Funding from some federal grants, gas tax from SB1, and local funding have contributed to preventative maintenance throughout the City.

The decision tree, included in Attachment 1, was reviewed and updated by City staff to reflect the most effective and realistic maintenance treatments for each group of roads by functional class and condition category.

The City continues to struggle with securing enough consistent revenues to reach Best Management Practices. Streets that are considered "Poor" and "Very Poor" category are generally not serviced unless outside funding or development contributes to the overall project cost.

E. Budget Needs

After the decision tree has been updated, the PMP will develop a maintenance strategy to improve and maintain the overall condition of the roads based on the principle that it costs less to maintain roads in good condition than those in bad condition (Best Management Practices, BMP). The functional

classification and condition of each road determines the appropriate maintenance and rehabilitation treatment and cost from the decision tree. The PMP will develop a maintenance strategy that will first improve the overall condition of the network and then sustain it at that level.

Under this strategy, the entire road network for the City was evaluated based on bringing all streets up to best management practices. This resulted in maintenance needs of approximately \$21.2M over the next five years. An annual 4% inflation factor was assumed. If the City of Wildomar follows this funding strategy recommended by the program, the average PCI will increase from 68 to 80. The results of the budget needs analysis are summarized in Table 4 and reports are provided in Attachment 2.

In essence, the funding level or maintenance needs determined illustrates the level of expenditures required to raise the pavement condition to a network PCI in the 80's and also eliminates the maintenance backlog. Of the \$21.2M in maintenance needs, approximately \$3.4M (about 16%) is programmed for preventive maintenance such as crack slurry seals, while the remaining \$17.8M is allocated for more costly rehabilitation and reconstruction treatments such as overlays.

It should be noted that in this analysis, the total funding needed is “front-loaded” i.e. it is less expensive to repair the streets in the first year than in subsequent years due to the effect of inflation. Therefore, the majority of the funding is allocated within the first several years of the analysis.

Table 4. Budget Needs for Best Management Practices (Unlimited Funding)

	2019	2020	2021	2022	2023	Total
PCI apply treatment	79	79	80	80	80	
PCI No treatment	68	66	64	62	60	
Preventative Maint. (\$)	\$2.7M	\$50K	\$205K	\$19K	\$333K	\$3.4M
Rehab/Reconstruct (\$)	\$7.0M	\$3.3M	\$4.0M	\$1.4M	\$1.9M	\$17.8M
Total Cost (\$)	\$9.8M	\$3.3M	\$4.3M	\$1.4M	\$2.3M	\$21.2M

F. Budget Scenario

Since the City does not have unlimited financial resources, decisions on transportation maintenance priorities will have to be made to make the best use of limited funds and implementing a cost-effective strategy in pavement preservation. Currently, the City allocates an annual amount of funds to be programmed in pavement preservation and improvements. The amount varies depending on other needs

and priorities in the City and has not been at consistent levels.

The City requested 2 budget scenarios: \$350k and \$850k annually. A 5-Year CIP was generated for each budget and the results are summarized below.

Scenario 1: 5-Year CIP with Budget of \$350,000/Annually

Under this Scenario, an annual budget of \$350,000 for 5 years will not be sufficient in maintaining the pavement network at best management levels. As a result, the deferred maintenance cost will almost double from 2019 to 2023 due to more intensive treatments, as shown in Figure 6 with the “Very Poor” bar (RED) increasing from 2.7% to 9% by 2023. The network PCI will drop 6 points from 68 to a 62 by Year 2023 as shown in Table 5 below.

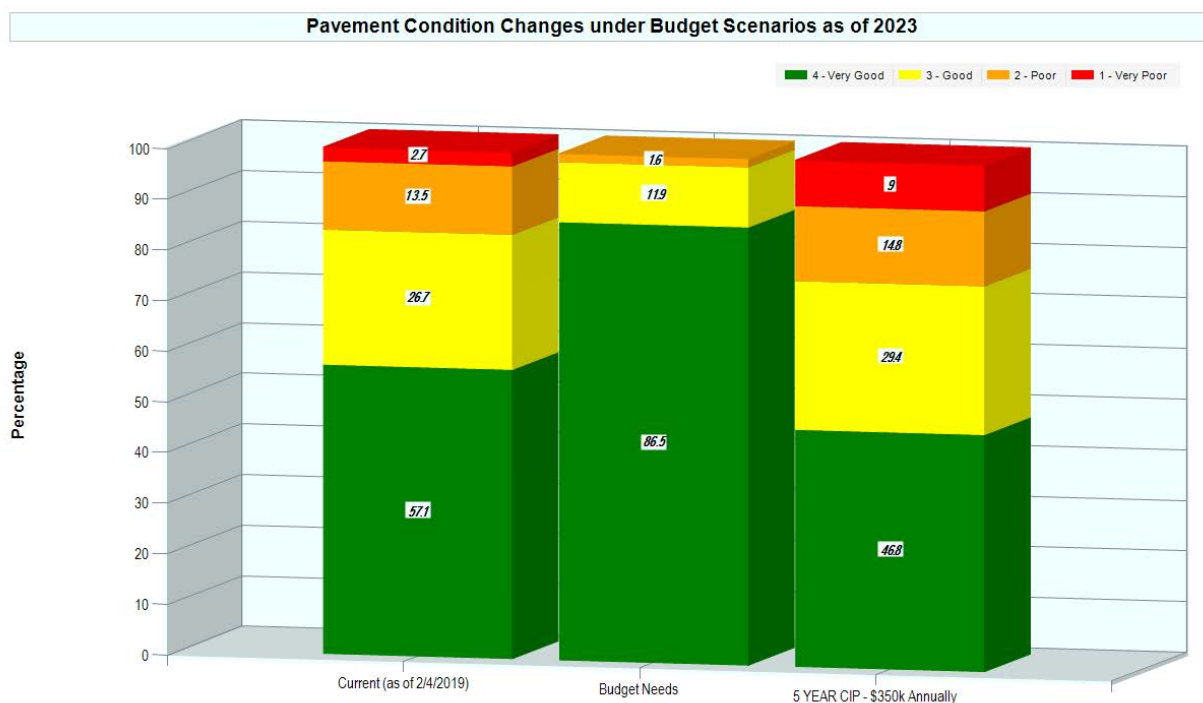

A map of the City identifying all the streets selected in **Scenario 1** for treatments and a list of streets classified by year, type of treatments and costs are included in Attachment 3.

Table 5. Results for Scenario 1 (\$350,000/Annually)

	2019	2020	2021	2022	2023
PCI apply treatment	68	67	65	63	62
PCI No treatment	68	66	64	62	60
Programmed Budget (\$)	\$350K	\$350K	\$350K	\$350K	\$350K
Deferred Cost (\$)	\$9.5M	\$12.1M	\$15.0M	\$16.3M	\$17.2M

Figure 6. Chart of Pavement Condition Changes under Scenario 1 (\$350,000/Annually)

Scenario 2: 5-Year Program with Budget of \$850,000/Annually

Under this Scenario, an annual budget of \$850,000 for 5 years will not be sufficient in maintaining the pavement network at best management levels. As a result, the deferred maintenance cost will increase from \$9M to \$15.3M from 2019 to 2023 due to more intensive treatments, as shown in Figure 7 with the “Very Poor” bar (RED) increasing from 2.7% to 9% by 2023. The network PCI will drop 4 points to a 64 by Year 2023 as shown in Table 6 below.

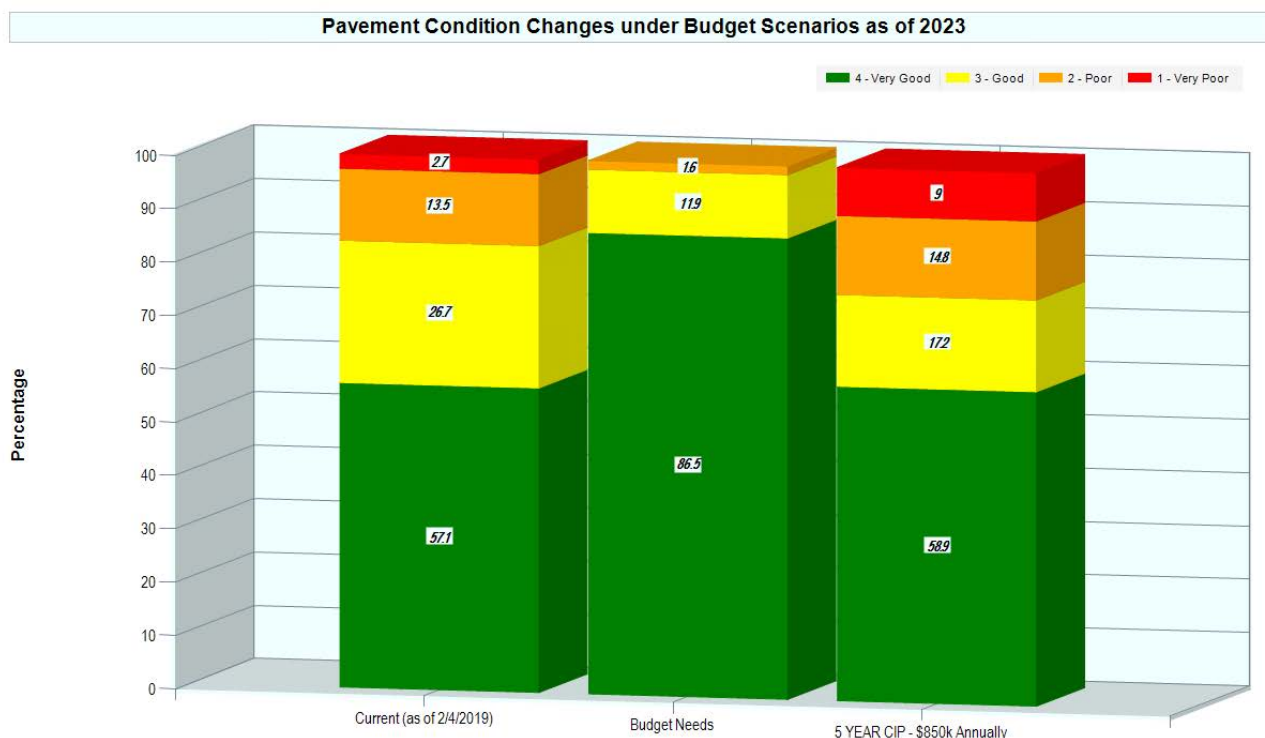

A map of the City identifying all the streets selected in **Scenario 2** for treatments and a list of streets classified by year, type of treatments and costs are included in Attachment 4.

Table 6. Results for Scenario 2 (\$850,000/Annually)

	2019	2020	2021	2022	2023
PCI apply treatment	69	68	67	65	64
PCI No treatment	68	66	64	62	60
Programmed Budget (\$)	\$850K	\$850K	\$850K	\$850K	\$850K
Deferred Cost (\$)	\$9.0M	\$11.1M	\$14.0M	\$14.9M	\$15.3M

Figure 7. Chart of Pavement Condition Changes under Scenario 2 (\$850,000/Annually)

G. Conclusion and Recommendations

The City of Wildomar pavement network is worth over \$86M. It provides vital public transportation traveling needs for bicycles, bus, passenger vehicles, and the delivery of goods and services that relies on a well maintained roadway system. A well maintained roadway system is critical for both the local and regional economy and communities. Recognizing that there are limited financial resources, it is critical that most cost-effective strategies are implemented and that the City continues to maintain the transportation infrastructure system in a safe and fiscally responsible manner.

Overall, the City's roads are in "Good" to "Fair" condition with an average PCI of 68. However, with the City's planned budgeting levels (\$350k or \$850k/annually), the average PCI of the network is expected to decrease by 4 to 6 points over the next five years, and the deferred maintenance backlog will increase significantly. The higher backlog will result in increased future costs as the need for more capital-intensive reconstruction treatments increases and deferred repairs of less expensive treatments (such as surface seals or thin overlays) are no longer feasible or effective.

The Best Management Practice (Budget Needs analysis) indicate that the City needs to spend a total of \$20M in pavement maintenance and rehabilitation over the next five years, in order to eliminate the

unfunded backlog of deferred maintenance. This will result in pavements in “Good” condition with on-going preventive maintenance.

Overall recommendations include the City develop a strong and well-funded preventive maintenance program. This is necessary to maintain the roads that are in good condition and avoid increasing the unfunded backlog even more. In light of the substantial financial commitment that is required to maintain and/or improve road conditions, there are other elements that should be considered in approaching and maintaining a PMP strategy:

1. Have a continual 2-year list of streets based on the 5-Year recommended work plan generated from the PMP. This will provide a basis for staff and other stakeholders to modify the plan and coordinate projects to minimize any future conflicts as well as pulling together a project that will be cost effective in terms of time and financial resources.
2. Update the PMP database annually to capture completed treated pavements, added/changed streets, maintenance and rehabilitation costs, treatment priorities and treatment strategies (new technology).
3. A successful PMP requires pavement be surveyed every 2-3 years for arterials/collectors and 3-4 years for residential streets.
4. Identify new funding sources through grants or direct local funding sources for preventative maintenance or rehabilitation treatments. Possible financing alternatives may include:
 - Truck Route Permit Fee – Leverages a surcharge fee on trucks for use of City roads to help recoup the costs of heavy wheel loads imposed by truck traffic.
 - Residential Waste Collection Fee – (Existing) Surcharge is leveraged on waste companies to account for damage to pavement incurred by heavy waste collection trucks.
 - Development Repairs – Fees assessed to new developments to account for increased traffic associated with new residential and commercial tenants. Also, alter improvement standards to require pavement rehab to centerline for contiguous development.
 - Establish Trench Cut Impact Fee – Fee is leveraged against utility to provide compensation for reduced pavement life due to utility cuts and patches.
 - Pursue Local Sales Tax Measures just for roads or in combination with other City-wide issues
 - Establish localized Business Assessment/Improvement Districts
 - Establish City-wide Assessment, Downtown or Business Improvement Districts
 - Pursue CalRecycle Grants for rubberized chip seals and overlays
 - Pursue federal/state grants that may include some pavement rehabilitation features

SECTION PCI/RSL LISTING (CITY INVENTORY)

This report lists a variety of section description information for each of the City's pavement sections. It includes the street and section identifiers, limits, functional class, surface type, number of lanes, lengths, widths, areas and current PCI as of January 2019.

All of the City's pavement sections are included in the report. The report is sorted alphabetically by Street Name and Section ID. The field descriptions in this report are listed below:

COLUMN DESCRIPTION

- ✓ Street Name - The name of the street as indicated by street signs in the field.
- ✓ Street ID - Street Identification, A code up to ten characters/digits to identify the street. Generally, the street name is truncated to six characters.
- ✓ Section ID - Section Identification, A code up to ten characters/digits to identify the section number.
- ✓ From - Beginning limit of the section.
- ✓ To - Ending limit of the section.
- ✓ # of Lanes - Number of travel lanes.
- ✓ Length (ft) - Length of the section in feet.
- ✓ Width (ft) - Average width of the section in feet.
- ✓ Area (sq ft) - Area of the section in square feet.
- ✓ FC Functional Classification - (A = Arterial, C = Collector, R = Residential).
- ✓ ST - Surface Type (AC = AC Pavement, O = AC Overlay of AC Pavement, AC/PCC = AC Overlay of PCC Pavement, PCC = PCC Pavement, ST = Surface treatment over gravel base/subgrade).
- ✓ Current PCI - Average PCI for the section. The value is current as of January 2019.
- ✓ Remaining Life – estimate remaining service life of the section.

City of Wildomar
Public Paved Streets
January 2019

-  Public Paved Streets
-  Private / Unpaved Roads

City of Wildomar Pavement Management Program - January 2019

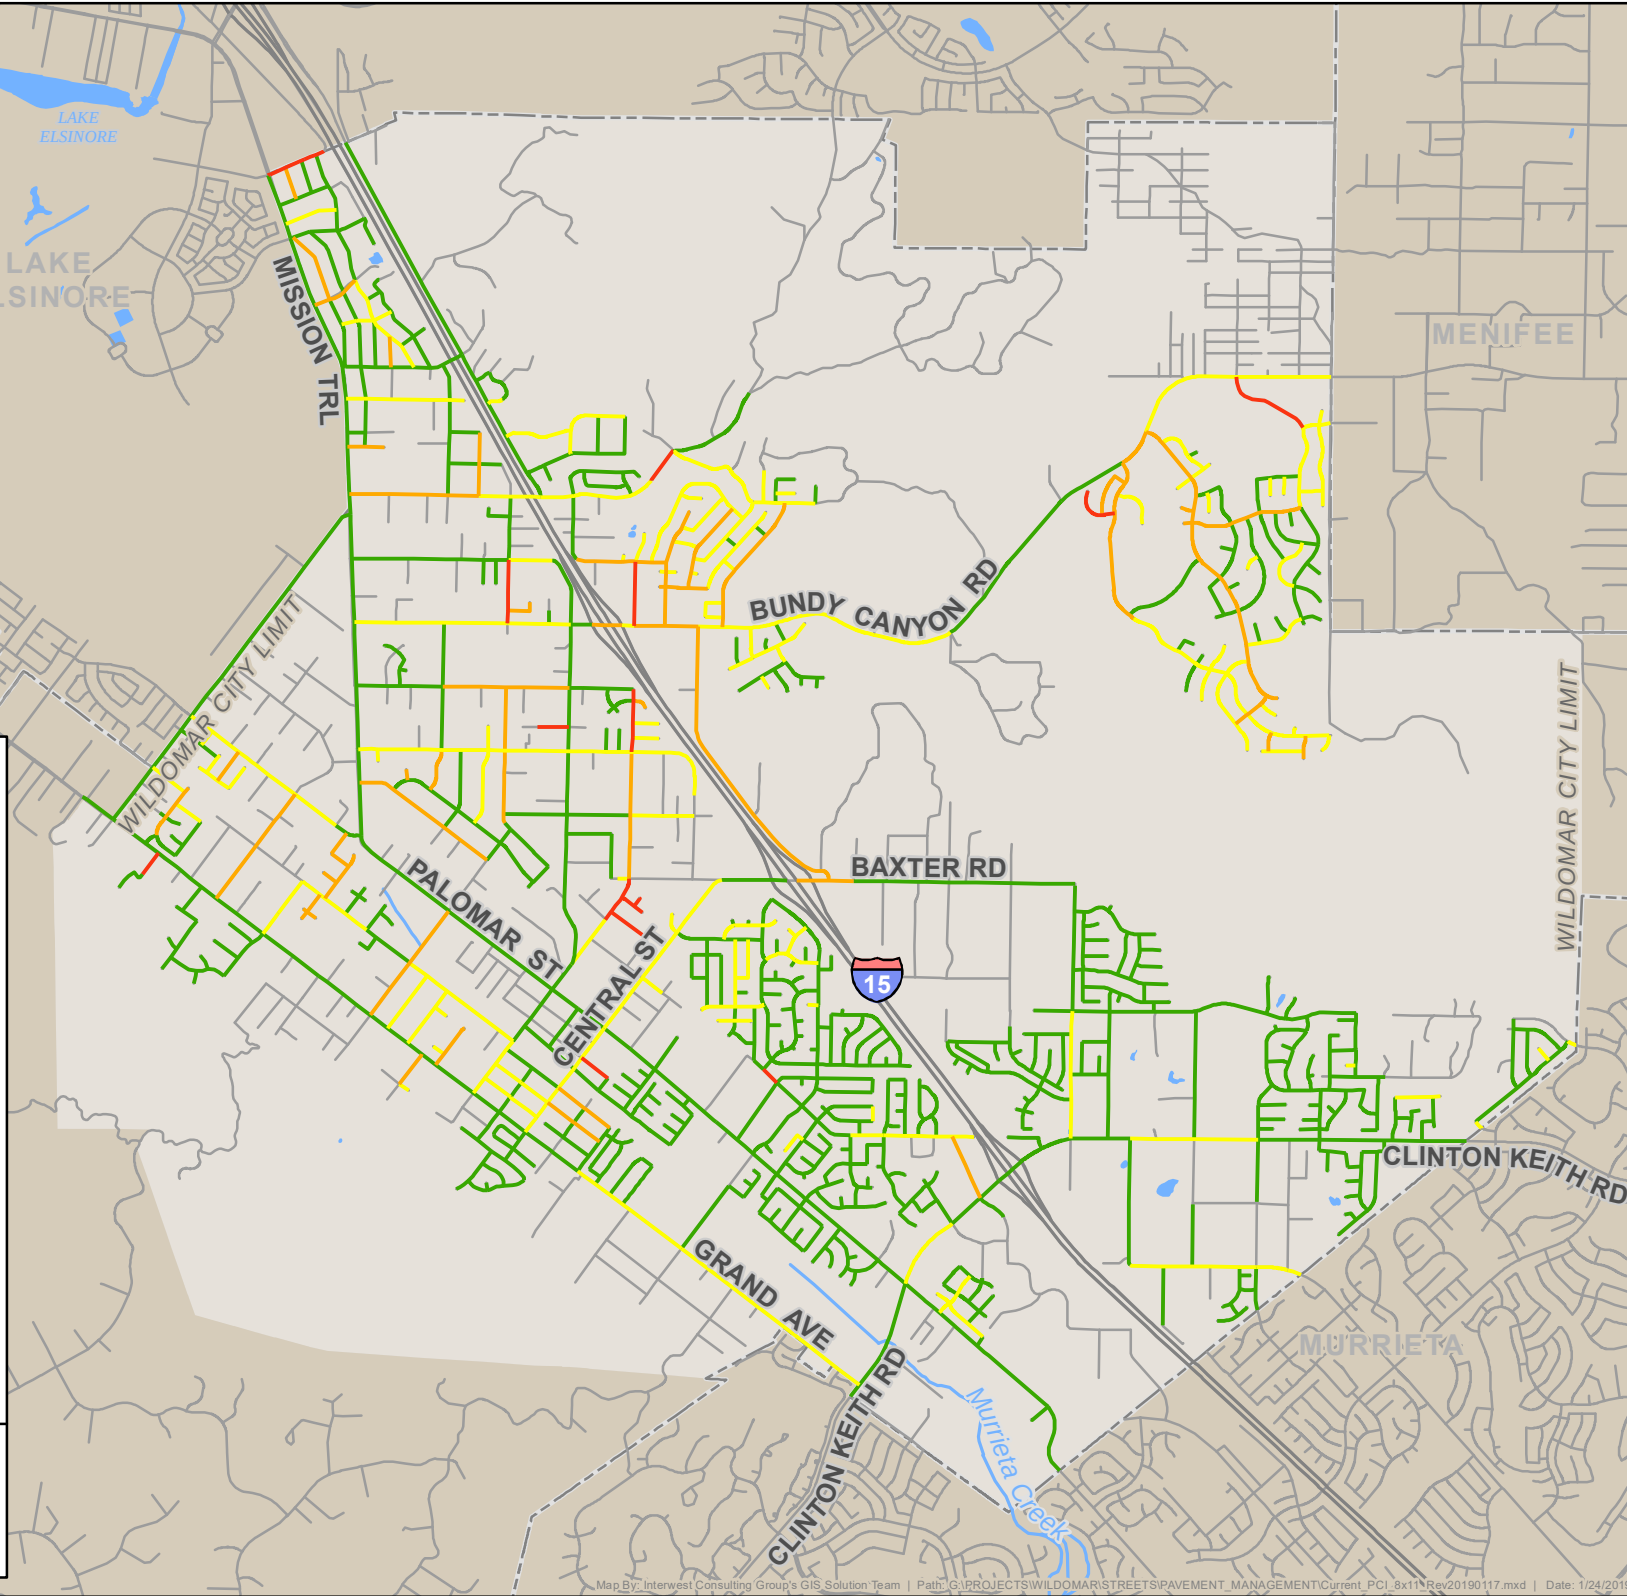

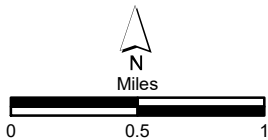

Pavement Condition Category and Index Range*

-  Good to Excellent (70-100)
-  Fair/At Risk (50-69)
-  Poor (25-49)
-  Very Poor/Failure (0-24)

Other Features

-  Streets not in the PMP

*Unpaved roads are not included and do not have PCI values.

ATTACHMENT 2 – BUDGET NEEDS

UNLIMITED FUNDING BEST MANAGEMENT PRACTICES

NEEDS – PROJECTED PCI/COST SUMMARY

NEEDS – SECTIONS SELECTED FOR TREATMENT (LIST OF STREETS)

NEEDS – PROJECTED PCI/COST SUMMARY

This report summarizes based upon year, the treated and untreated PCI and associated costs from the Needs calculation. It includes a breakdown of the total annual Needs by Preventative Maintenance and Rehabilitation treatments costs.

Needs - Projected PCI/Cost Summary

Inflation Rate = 4.00 % Printed: 01/31/2019

Year	PCI Treated	PCI Untreated	PM Cost	Rehab Cost	Cost
2019	79	68	\$2,785,174	\$7,063,909	\$9,849,083
2020	79	66	\$50,770	\$3,301,320	\$3,352,090
2021	80	64	\$205,154	\$4,065,541	\$4,270,695
2022	80	62	\$19,827	\$1,459,885	\$1,479,712
2023	80	60	\$332,953	\$1,984,090	\$2,317,043
		% PM	PM Total Cost	Rehab Total Cost	Total Cost
		15.96%	\$3,393,878	\$17,874,745	\$21,268,623
